About the business

iGreenData is a next-generation technology company focusing on Cloud, Data, and Digital first solutions that are changing how technology provides value to businesses, empowering organisations to take advantage of the scalability, reliability, and improved performance of cloud computing. We offer highly differentiated technology services to our customers. Our customers benefit from the industry-leading digital and cloud capabilities we deliver together with our niche partner ecosystem. We leverage our intellectual property and our unique family of accelerators to helping our customers develop and run Intelligent businesses and transform the customer experience.

What you'll contribute to the position

As a Developer Programmer, you will use technical expertise to design and implement software solutions for our customers. You'll apply your passion for building clean, robust code to large-scale systems. With your well-developed interpersonal skills, you will be an active team member and contribute to delivering customer-focused, optimal quality business outcomes.

About the role

With iGreenData, you'll excel as a Developer Programmer engaging with your peers in the design and development process alongside customer stakeholders.

What you'll do:

- Here's an overview of some of the responsibilities as a Developer Programmer.
- Work in agile software delivery teams.
- Implement software technology solutions that meet and exceed customer requirements and expectations

- Builds, maintains, and modifies software application code, generates technical requirements from a business functional model, and tests and writes technical documentation.
- Develop high-quality code that can function with existing code, patterns, and architectural techniques
- Effectively utilise development best practices
- Active participation in team agile development practices
- Ensure superior code quality through methods including unit testing
- Design systems that are effective in production environments and are easy to maintain
- Help our clients maintain and run reliable applications and systems
- Promote modern Developer Programmer practices
- Keep your skills up to date and always be looking for continuous improvement

Experience and Skills

- A minimum of 5 years of Developer Programmer Experience
- Hands-on experience on Spring Boot, Microservices & Serverless Architecture
- Critical to have solid development experience in a Java focused on data, APIs & Microservices
- Experience in Java & Java frameworks - Spring (Core, MVC, Boot), Struts, JPA/Hibernate
- Experience with API design and building RESTful web services
- Experience in Multi-threading and high availability / high throughput programming
- Experience with Performance tuning
- Proven skills with HTML5, CSS3, JavaScript, React/Angular
- Experience with Containerisation/Kubernetes Docker
- AWS Cloud project experience
- Experience working with any cloud platform AWS, GCP, AZURE
- Microservices, AWS/GCP Cloud Deployment, and API
- Excellent verbal and written communication skills
- Strong time management skills with the ability to prioritise workloads under pressure and meet deadlines
- A self-starter who is hands-on and knows how to find answers and work with ambiguity
- Value-driven and practical in your approach

If this opportunities sound likes something you would be interested in, we want to hear from you! Our team will assess your application, and if we feel that you could be a good fit for any of our client partners, we will be in touch regarding the next steps. You must have the right to live and work in this location to apply for this job

Employer questions

Your application will include the following questions:

How much notice are you required to give your current employer?

Which of the following statements best describes your right to work in Australia?
